DETAILED ACTION

Response to Amendment

1. Amendments to claims 1-4, 6-8, 16-19, 25 and 28 have been entered in the above-identified application. **Claims 1-13 and 15-30 are pending.**

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-14 and 15-30 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,813,153 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other.

Claims 1-22 of US. Patent No. 6,813,153 B2 recite a polymer solder thermal interface material comprising an alloy of gold filler having a m.p. of approximately 600°C and an indium-tin-bismuth solder having a m.p. less than that of the filler.

The claims of the instant application, on the other hand, recite a polymeric thermal interface material comprising fusible metal solder particles having a m.p. below 300°C and filler particles having a melting temperature above 300°C wherein the metal solder material may be InSiBi.

It would have been obvious to one having ordinary skill in the art to form a thermal interface material comprising an alloy of gold filler having a m.p. of approximately 600°C and an indium-tin-bismuth solder having a m.p. less than that of the filler given that it is obvious to combine the limitations of the dependent claims of the instant application.
